

QUICK START GUIDE

WELCOME TO THE STEVENS ADVANTAGE COMMERCIAL CABINET AND MILLWORK REVIT CATALOG

HOW TO USE:

Click the appropriate link under the Revit/BIM Install title. The Stevens Revit family downloads are over 100 MB.

For the Search Routine and family pick the first link, download/open the .msi file., and follow the onscreen instructions.

-Once install is complete the **Stevens Tab** will be located at the top left or in the **Add-Ins** tab on the main Revit Page when you start a new Revit project. Pick this tab to open the search window and load new families into Revit as needed for your project. This keeps the sidebars less cluttered and makes it easier to find repeated families in your project.

-In the Search Window that opens you can type in the Stevens Model Number or set the filters as needed to narrow your search. Next, click on the 3D model at the right, select the sizes you want and click **insert**. The model will be inserted for your use in the Revit Project Browser under the Casework header. Repeat this as needed to load up your models for your project.

If you prefer to use only the cabinet families and no search routine or to load all the families pick the second link, download the .zip file and manually unzip the families into the appropriate locations for your use.

All Stevens softwares, especially Revit versions, will be updated often with new models and suggested improvements from the Website:
